[View Online Demo](#)

Note: The app runs on IE essentially but for Gmail/chrome/Firefox a pop up window asks if you would let multi-browser install, you have to select NOT 'once'/this time only. It works similarly in safari too but with installed a windows alternate system on the mac machine.

Features

CanManDo allows medical practitioners to:

- Enter precise patient information and print reports
- Update case histories for ready retrieval in future.
- Stage your patient accurately by TNM/other systems.
- Observe Tumor kinetics to understand its development and plan treatment strategy.
- Use detailed drug information, 300 + site/histology specific treatment protocols with references, devise protocols and check accounts.
- Employ a newly proposed, bi/trinomial nomenclature for Cancer Chemotherapy drugs.
- Get computed doses based on 240 drugs' toxic potential and patient's physical/biochemical profile.
- Keep over billion records and 250 clinical parameters in SI format, entered in standard or SI units.
- Optionally test your staging skills at basic or at an advanced level and watch your scores grow.

Development

This program was developed by the author in Turbo basic and its Power basic version over the period from 1986-1996. When near completion it was transferred to Windows platform. A stream of developers assisted in achieving this final form:

- Jeetendra Jilka and Mrs. Eapen
- Mr Bhushan and his team Vikram, Dinesh, Suresh, Yogesh (deploy).
- Suresh has been mainstay of effort. He has shown considerable grasp and diligence in writing the code while I looked after the carpentry (preparation of tables !) and over last 15 years had to learn and make considerable alterations as needed by viewers.

Software Modules and Version

Modules 1.1-1.9 Version 1
